Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

Empathy Map – Weather-Wise

 What does he/she SAY? • "I want to know the current weather conditions." • "I need accurate weather forecasts to plan my day." • "It would be helpful to receive weather updates in one place."	 What does he/she THINK? • "Will it rain today?" • "Can I plan my outdoor activities safely?" • "I need a simple and reliable weather application." 	 What does he/she SEE? • "Weather conditions shown in apps and websites." • "Temperature, rainfall and forecast updates." • "Weather alerts and notifications from different sources."
 What does he/she DO? • Checks weather forecasts before travelling. • Uses weather applications to view temperature and conditions. • Plans daily activities based on weather updates.	 What does he/she FEEL? • Concerned about sudden weather changes. • Frustrated when weather information is unclear or outdated. • Confident when reliable forecasts are available.
