

Project Design Phase
Proposed Solution Template

Date	30 September 2026
Team ID	SWTID-2026-9716
Project Title	Weather Wise
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Getting accurate and useful weather information can be difficult when users need data for different locations and activities. Traditional weather systems may provide raw weather data without personalized insights, alerts, or easy-to-understand recommendations.
2.	Idea / Solution description	AI WeatherWise API is an AI-powered weather service that provides real-time weather information, forecasts, and intelligent weather insights through an API. It can provide information such as temperature, rainfall, wind, air quality, and weather conditions, along with AI-generated summaries and recommendations.
3.	Novelty / Uniqueness	AI WeatherWise API combines weather data with Artificial Intelligence to provide meaningful and personalized weather information. It can provide easy-to-understand weather summaries, smart recommendations, air-quality information, and weather alerts through a single API.
4.	Social Impact / Customer Satisfaction	AI WeatherWise API helps users understand weather conditions quickly and make better day-to-day plans. It can provide useful weather alerts and recommendations for outdoor activities, travel, events, and other weather-dependent activities.
5.	Business Model (Revenue Model)	AI WeatherWise API can follow a freemium model where basic weather API services are available for free and advanced AI features are provided through premium plans. Revenue can also be generated through subscription-based API access and customized services.
6.	Scalability of the Solution	AI WeatherWise API can be scaled to support more users, locations, applications, and API requests. Its API-based architecture

		allows additional AI models, weather data sources, forecasting features, alerts, and third-party integrations to be added in the future.
